

Safe, Simple and Affordable Outside Heating Systems

Providing a warm and comfortable outside environment

Ceramic Infrared Patio Heater

Heat Where Your Customers Want It!

In line with changing consumer trends and pending UK legislation, more and more people are choosing the freedom of an outdoor environment in which to enjoy a sociable drink or meal with their friends.

PubSun allows you to provide them with the warmth and comfort to really appreciate the experience, simply and extremely cost-effectively.

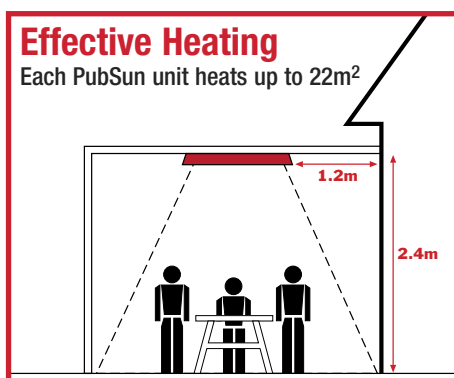

The **PubSun Patio Heater** is designed to gently warm people in an outdoor covered area using the principles of infrared radiation. This type of radiation is completely harmless and contains no ultraviolet (UV) radiation. The system consists of highly emissive ceramic heating elements mounted in an attractive wall-mounted unit. The reflective interior of the unit effectively radiates heat emitted from the ceramic elements, warming the body directly without the air in between being warmed.

You can turn on the heat in no time at all since the ceramic elements start to warm up as soon as the heater is switched on and full operating temperature is achieved in less than 10 minutes.

In fact, **PubSun** is so simple and so effective, you can simply 'Fit & Forget' it. But your customers won't forget the warm glow on your patio – whatever the season!

Ceramic Technology for Optimum Heating & Durability

It is clear why many businesses are opting for ceramic infrared technology heating solutions. Due to the safe and long wavelengths of ceramic infrared technology, the

PubSun provides a much more gentle

delivery of heat to the outside area, unlike other types of heating, thus resulting in a softer, more comfortable environment.

Ceramic technology boasts a significantly increased life span and completely safe for customers and staff, as there are no expensive glass bulbs to break or replace. This technology is also not susceptible to any damage from high current surges, unlike glassbulb alternatives. **PubSun** offers maximum durability and delivers a staggering 10,000 hours of comfortable heating. And it is maintenance free – fit and forget!

“Due to pending legislation, a warm, comfortable outside environment is becoming even more necessary”

It's the **Number 1** System in Ireland

PubSun is manufactured in Ireland and is their market-leading patio heater of choice due to its robust yet safe and proven design. It is an affordable solution for creating a comfortable outside area with a fast payback on investment.

PubSun is available exclusively in the UK through Mecserflex, a leading supplier of commercial catering equipment in the UK and Europe.

Unique **PubSun** Benefits

- Extremely safe
- No fumes
- Low cost of use and ownership
- All units mounted overhead
- Suitable for undercover use
- No uncomfortable red glare
- Instant heat
- Easy to organise seating and tables
- No expensive gas bottles to replace or store
- 10,000 hours guaranteed
- No glass/no bulbs
- Easy Installation

In addition to normal running costs, there are also additional costs involved in bottle storage and rental; as well as training of staff in replacing and handling gas bottles to H.S.E. legislation, which do not apply to **PubSun** products.
